

Deployment Guide: Live in Weeks

The four-step motion, and what your team provides at each stage.

01 – ON-SITE

We walk your floor, meet your maintenance and controls teams, and map the systems and the failure modes that hurt most.

02 – INGEST

We bring in PLC programs, schematics, manuals, and maintenance history so Jack learns your equipment, not a generic factory.

03 – TAILOR

Jack is tuned to how you actually run — your tags, your line names, your procedures.

04 – LIVE

Jack goes live on your line. Results in 30 days, measured against your own downtime.
